COALITION**

Statement in Support of the National Artificial Intelligence Initiative Act in the FY 2021 National Defense Authorization Act

August 5, 2020

The Honorable Adam Smith
Chairman
Committee on Armed Services
2216 Rayburn House Office Building
Washington, DC 20515

The Honorable Mac Thornberry
Ranking Member
Committee on Armed Services
2216 Rayburn House Office Building
Washington, DC 20515

Dear Chairman Smith and Ranking Member Thornberry:

On behalf of the 100 organizations involved in the Energy Sciences Coalition (ESC), we thank you for including the National Artificial Intelligence Initiative Act in the final House FY 2021 National Defense Authorization Act. We ask that the AI bill be included in the final, conferenced FY 2021 National Defense Authorization Act.

The ESC believes this legislation is critically important to help improve coordination across federal agencies, increase research and development investments, expand education opportunities, and foster public-private partnerships to maintain U.S. leadership in Artificial Intelligence (AI) and accelerate its adoption for scientific discovery. ESC also supports the legislation's commitment to develop ethical, safe, robust, and reliable AI systems consistent with American values.

In particular, ESC would like to highlight support for the section which authorizes a Department of Energy (DOE) AI research program. DOE, and in particular the Office of Science, is uniquely positioned to advance the development of AI. DOE can also leverage new AI tools and capabilities to support its own unique nuclear security missions and support broader national security missions of the Department of Defense and other national security agencies. For example, the Office of Science is the largest government sponsor for basic research in the physical sciences and a leading sponsor for computing and engineering supporting 22,000 Ph.D. scientists, engineers, graduate students, undergraduates and technical personnel at more than 300 institutions across all 50 states and the District of Columbia. These DOE-funded research and education programs are essential to making the development and adoption of AI a success. In addition, the Office of Science supports the operation of the largest collection of major scientific user facilities in the world. Located at national laboratories and universities across the country, these 27 facilities include leadership-class supercomputers, particle accelerators, experimental reactors, X-ray synchrotron and free-electron laser light sources and other high-precision instruments. These user facilities will both help advance AI and be major beneficiaries of AI tools to accelerate the pace of scientific innovation.

ESC thanks you for advancing this important AI legislation and looks forward to continue working with the Committee to make progress on this Industry of the Future.

The Energy Sciences Coalition (ESC) is a broad-based coalition of organizations representing scientists, engineers and mathematicians in universities, industry and national laboratories who are committed to supporting and advancing the scientific research programs of the U.S. Department of Energy (DOE), and in particular, the DOE Office of Science.
