118TH CONGRESS
1ST SESSION

H. R. _____

To improve the Federal effort to reduce wildland fire risks, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

Ms. LOFGREN introduced the following bill; which was referred to the Committee on

A BILL

To improve the Federal effort to reduce wildland fire risks, and for other purposes.

1 Be it enacted by the Senate and House of Representa-
2 tives of the United States of America in Congress assembled,

3 SECTION 1. SHORT TITLE.

4 This Act may be cited as the “National Wildland Fire
5 Risk Reduction Program Act”.

6 SEC. 2. ESTABLISHMENT.

7 The President shall establish a National Wildland
8 Fire Risk Reduction Program with the purpose of achiev-
9 ing major measurable reductions in the losses of life and
property from wildland fires through a coordinated Federal effort to—

(1) improve the assessment of fire environments and the understanding and prediction of wildland fires, associated smoke, and their impacts, including—

(A) at the wildland-urban interface;

(B) on communities, buildings and other infrastructure;

(C) on ecosystem services; and

(D) social and economic impacts;

(2) develop and encourage the adoption of science-based and cost-effective measures to enhance resilience to wildland fires and prevent and mitigate negative impacts of wildland fires and associated smoke; and

(3) improve the understanding and mitigation of the impacts of climate change and variability on wildland fire risk, frequency, and severity, and to inform paragraphs (1) and (2).

SEC. 3. PROGRAM ACTIVITIES.

The Program shall consist of the activities described under section 7, which shall be designed—

(1) to support research and development, including interdisciplinary research, related to fire en-
environments, wildland fires, associated smoke, and their impacts, in furtherance of a coordinated inter-agency effort to address wildland fire risk reduction;

(2) to support data management and stewardship, the development and coordination of data systems and computational tools, and the creation of a centralized, integrated data collaboration environment for Program agency data, to accelerate the understanding of fire environments, wildland fires, associated smoke, and their impacts, and the benefits of wildland fire risk mitigation measures;

(3) to support the development of tools and technologies, including decision support tools and risk and hazard maps, to improve understanding, monitoring, prediction, and mitigation of wildland fires, associated smoke, and their impacts;

(4) to support education and training to expand the number of students and researchers in areas of study and research related to wildland fires;

(5) to accelerate the translation of research related to wildland fires and associated smoke into operations to reduce risk to communities, buildings, other infrastructure, and ecosystem services;

(6) to conduct communication and outreach regarding wildland fire science and wildland fire risk
mitigation, to communities, energy utilities and operators of other critical infrastructure, and other relevant stakeholders;

(7) to support research and development projects funded under joint solicitations or through memoranda of understanding between no fewer than two agencies participating in the Program; and

(8) to disseminate, to the extent practicable, scientific data and related products and services in formats meeting shared standards to enhance the interoperability, usability, and accessibility of Program Agency data, including data as part of paragraph (2) in order to better meet the needs of Program agencies, other Federal agencies, and relevant stakeholders.

SEC. 4. INTERAGENCY COORDINATING COMMITTEE ON WILDLAND FIRE RISK REDUCTION.

(a) ESTABLISHMENT.—Not later than 90 days after enactment of this Act, the Director of the Office of Science and Technology Policy shall establish an Interagency Coordinating Committee on Wildland Fire Risk Reduction (in this Act referred to as "the Committee"), to be co-chaired by the Director and the Director of the National Institute of Standards and Technology.
(b) MEMBERSHIP.—In addition to the co-chairs, the Committee shall be composed of—

(1) the Director of the National Science Foundation;

(2) the Administrator of the National Oceanic and Atmospheric Administration;

(3) the Administrator of the Federal Emergency Management Agency;

(4) the United States Fire Administrator;

(5) the Chief of the Forest Service;

(6) the Administrator of the National Aeronautics and Space Administration;

(7) the Administrator of the Environmental Protection Agency;

(8) the Secretary of Energy;

(9) the Director of the Office of Science and Technology Policy;

(10) the Director of the Office of Management and Budget;

(11) the Secretary of the Interior;

(12) the Director of United States Geological Survey;

(13) the Secretary of Health and Human Services;

(14) the Secretary of Defense;
(15) the Secretary of Housing and Urban Development; and

(16) the head of any other Federal agency that the Director considers appropriate.

(c) MEETINGS.—The Committee shall meet not less than twice a year for the first two years and then not less than once a year at the call of the Director.

(d) GENERAL PURPOSE AND DUTIES.—The Committee shall oversee the planning, management, and coordination of the Program, and solicit stakeholder input on Program goals.

(e) STRATEGIC PLAN.—The Committee shall develop and submit to Congress, not later than 1 year after enactment, and update every 4 years thereafter, a Strategic Plan for the Program that includes—

(1) prioritized goals for the Program, consistent with the purposes of the Program as described in section 2;

(2) short-term, mid-term, and long-term research and development objectives to achieve those goals;

(3) a description of the role of each Program agency in achieving the prioritized goals;

(4) a description of how the Committee will foster collaboration between and among the Program
agencies and other Federal agencies to help meet the
goals of the Program;

(5) the methods by which progress toward the
goals will be assessed;

(6) an explanation of how the Program will fos-
ter the translation of research into measurable re-
ductions in the losses of life, property, and eco-
system services from wildland fires, including rec-
ommended outcomes and metrics for each program
goal and how operational Program agencies will
transition demonstrated technologies and research
findings into decision support tools and operations;

(7) a description of the research infrastructure,
including databases and computational tools, needed
to accomplish the research and development objec-
tives outlined in paragraph (2), a description of how
research infrastructure in existence at the time of
the development of the plan will be used to meet the
objectives, an explanation of how new research infra-
structure will be developed to meet the objectives,
and a description of how the program will implement
the integrated data collaboration environment per
section 3(2);

(8) a description of how Program agencies will
collaborate with stakeholders and take into account
stakeholder needs and recommendations in developing research and development objectives;

(9) recommendations on the most effective means to integrate the research results into wildland fire preparedness and response actions across Federal, State, local, Tribal, and territorial levels;

(10) guidance on how the Committee's recommendations are best used in climate adaptation planning for Federal, State, local, Tribal, and territorial entities;

(11) a nationally recognized, consensus-based definition of wildland-urban interface and other key terms and definitions relating to wildland fire, developed in consideration of the meaning given such term in section 4(11) of the Federal Fire Prevention and Control Act of 1974 (15 U.S.C. 2203(11)); and

(12) a description of opportunities to support new areas of research and development and new types of collaborations that seek to optimize building and landscape design across multiple resilience goals, including resilience to wildland fires and other natural hazards, energy efficiency, and environmental sustainability.

(f) COORDINATION WITH OTHER FEDERAL EFFORTS.—The Director shall ensure that the activities of
the Program are coordinated with other relevant Federal
initiatives as appropriate.

(g) NATIONAL ACADEMIES STUDY.—The Committee
shall assess the need for a study, or a series of studies,
to be conducted by the National Academies of Sciences,
Engineering, and Medicine, and how such a study, or se-
ries of studies, could help identify research areas for fur-
ther study and inform research objectives, including fur-
ther research into the interactions between climate change
and wildland fires. The Committee shall brief the Com-
mittee on Science, Space, and Technology of the House
of Representatives and the Committee on Commerce,
Science, and Transportation of the Senate on its assess-
ment under this subsection not later than 1 year after the
date of enactment of this Act.

(h) PROGRESS REPORT.—Not later than 18 months
after the date of the transmission of the first Strategie
Plan under subsection (e) to Congress and not less fre-
quently than once every two years thereafter, the Com-
mittee shall submit to Congress a report on the progress
of the Program that includes—

(1) a description of the activities funded under
the Program, a description of how those activities
align with the prioritized goals and research objec-
tives established in the Strategic Plan, and the
budgets, per agency, for these activities; and
(2) the outcomes achieved by the Program for
each of the goals identified in the Strategic Plan.

SEC. 5. NATIONAL ADVISORY COMMITTEE ON WILDLAND
FIRE RISK REDUCTION.

(a) IN GENERAL.—The Director shall establish a Na-
tional Advisory Committee on Wildland Fire Risk Reduc-
tion, consisting of not fewer than seven and not more than
15 members who are qualified to provide advice on
wildland fire risk reduction and represent related sci-
cific, architectural, and engineering disciplines, none of
whom may be employees of the Federal Government, in-
cluding—
(1) representatives of research and academic in-
stitutions;
(2) standards development organizations;
(3) emergency management agencies;
(4) State, local, and Tribal governments;
(5) business communities, including the insur-
ance industry; and
(6) other representatives as designated by the
Director.

(b) ASSESSMENT.—The Advisory Committee shall
offer assessments and recommendations on—
(1) trends and developments in the natural, engineering, and social sciences and practices of wildland fire risk mitigation;

(2) the priorities of the Program’s Strategic Plan;

(3) the management, coordination, implementation, and activities of the Program;

(4) the effectiveness of the Program in meeting its purposes; and

(5) the need to revise the Program.

(c) COMPENSATION.—The members of the Advisory Committee established under this section shall serve without compensation.

(d) REPORTS.—At least every 2 years, the Advisory Committee shall report to the Director on the assessments carried out under subsection (b) and its recommendations for ways to improve the Program.

(e) CHARTER.—Notwithstanding section 14(b)(2) of the Federal Advisory Committee Act (5 U.S.C. App.), the Advisory Committee shall not be required to file a charter subsequent to its initial charter, filed under section 9(e) of such Act, before the termination date specified in subsection (f) of this section.

(f) TERMINATION.—The Advisory Committee shall terminate on September 30, 2026.
(g) **Conflict of Interest.**—An Advisory Committee member shall recuse himself from any Advisory Committee activity in which he has an actual pecuniary interest.

**Sec. 6. Government Accountability Office Review.**

Not later than three years after the date of the enactment of this Act, the Comptroller General of the United States shall submit to Congress a report that—

(1) evaluates the progress and performance of the Program in establishing and making progress toward the goals of the Program as set forth in this Act; and

(2) includes such recommendations as the Comptroller General determines are appropriate to improve the Program.

**Sec. 7. Responsibilities of Program Agencies.**

(a) **National Institute of Standards and Technology.**—The responsibilities of the Director of the National Institute of Standards and Technology with respect to the Program are as follows:

(1) **Research and Development Activities.**—The Director of the National Institute of Standards and Technology shall—

(A) carry out research on the impact of wildland fires on communities, buildings, and
other infrastructure, including structure-to-
structure transmission of fire and spread within
communities;

(B) carry out research on the generation of
firebrands from wildland fires and on methods
and materials to prevent or reduce firebrand igni-
tion of communities, buildings, and other infra-
structure;

(C) carry out research on novel materials,
systems, structures, and construction designs to
harden structures, parcels, and communities to
the impact of wildland fires;

(D) carry out research on the impact of
environmental factors on wildland fire behavior,
including wind, terrain, and moisture; and

(E) support the development of performance-based tools to mitigate the impact of
wildland fires, and work with appropriate
groups to promote and assist in the use of such
tools, including through model building codes
and fire codes, standard test methods, vol-
untary consensus standards, and construction
and retrofit best practices.
(2) WILDLAND-URBAN INTERFACE FIRE POST-INVESTIGATIONS.—The Director of the National Institute of Standards and Technology shall—

(A) coordinate Federal post-wildland fire investigations of fires at the wildland-urban interface; and

(B) develop methodologies, in collaboration with the Administrator of FEMA and in consultation with relevant stakeholders, to characterize the impact of wildland fires on communities and the impact of changes in building and fire codes, including methodologies—

(i) for collecting, inventoring, and analyzing information on the performance of communities, buildings, and other infrastructure in wildland fires; and

(ii) for improved collection of pertinent information from different sources, including first responders, the design and construction industry, insurance companies, and building officials.

(b) NATIONAL SCIENCE FOUNDATION.—As a part of the Program, the Director of the National Science Foundation shall support—
(1) research, including large-scale convergent research, to improve the understanding and prediction of wildland fire risks, including the conditions that increase the likelihood of a wildland fire, the behavior of wildland fires, and their impacts on buildings, communities, infrastructure, ecosystems and living systems;

(2) development and improvement of tools and technologies, including databases and computational models, to enable and accelerate the understanding and prediction of wildland fires and their impacts;

(3) development of research infrastructure, as appropriate, to enable and accelerate the understanding and prediction of wildland fires and their impacts, including upgrades or additions to the National Hazards Engineering Research Infrastructure;

(4) research to improve the understanding of—

(A) the response to wildland fire risk and response messages by individuals, communities, and policymakers;

(B) social and economic factors influencing the implementation and adoption of wildland fire risk reduction and response measures by individuals, communities, and policymakers; and
(C) decision-making and emergency response to wildland fires;

(5) undergraduate and graduate research opportunities and graduate and postdoctoral fellowships and traineeships in fields of study relevant to wildland fires and their impacts; and

(6) research to improve the understanding of the impacts of climate change and climate variability on wildland fires, including wildland fire risk, frequency, and severity, and wildland fire prediction, mitigation, and resilience strategies.

(c) NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION.—

(1) IN GENERAL.—The Administrator of the National Oceanic and Atmospheric Administration (in this subsection referred to as the "Administrator") shall conduct research, observations, modeling, forecasting, prediction, and historical analysis of wildland fires to improve understanding of wildland fires, and associated fire weather and smoke, for the protection of life and property and for the enhancement of the national economy.

(2) WEATHER FORECASTING AND DECISION SUPPORT FOR WILDLAND FIRES.—The Administrator shall—
(A) develop and provide in consultation with the relevant Federal Agencies, as the Administrator determines appropriate, accurate, timely, and effective warnings and forecasts of wildland fires and fire weather events that endanger life and property, which may include red flag warnings, operational fire weather alerts, and any other warnings or alerts the Administrator deems appropriate;

(B) provide stakeholders and the public with impact-based decision support services, seasonal climate predictions, air quality products, and smoke forecasts; and

(C) provide on-site weather forecasts, seasonal climate predictions, and other decision support to wildland fire incident command posts, including by deploying incident meteorologists for the duration of an extreme event.

(3) WILDLAND FIRE DATA.—The Administrator shall contribute to and support the centralized, integrated data collaboration environment per section 3(2) and any other relevant Federal data systems by ensuring—

(A) interoperability, usability, and accessibility of National Oceanic and Atmospheric Ad-
ministration data and tools related to wildland
fires, associated smoke, and their impacts;
(B) inclusion of historical wildland fire in-
cident and fire weather data, and identifying
potential gaps in such data; and
(C) the acquisition or collection of addi-
tional data that is needed to advance wildland
fire science.

(4) WILDLAND FIRE AND FIRE WEATHER SUR-
VEILLANCE AND OBSERVATIONS.—The Adminis-
trator, in coordination with Administrator of the Na-
tional Aeronautics and Space Administration and in
consultation with relevant stakeholders—
(A) shall leverage existing observations,
technologies and assets and develop or acquire
new technologies and data to sustain and en-
hance environmental observations used for
wildland fire prediction and detection, fire
weather and smoke forecasting and monitoring,
and post-wildland fire recovery, with a focus
on—
(i) collecting data for pre-ignition
analysis, such as drought, fuel and vegeta-
tion conditions, and soil moisture, that will
help predict severe wildland fire conditions on subseasonal to decadal timescales;

(ii) supporting identification and classification of fire environments at the smallest practical scale to determine vulnerability to wildland fires and rapid wildland fire growth;

(iii) detecting, observing, and monitoring wildland fires and smoke;

(iv) supporting research on the interaction of weather and wildland fire behavior; and

(v) supporting post-fire assessments conducted by Program agencies and relevant stakeholders;

(B) shall prioritize the ability to detect, observe, and monitor wildland fire and smoke in its requirements for its current and future observing systems and commercial data purchases; and

(C) not later than 12 months after the date of enactment of this Act—

(i) may offer to enter into contracts with one or more entities to obtain additional airborne and space-based data and
observations that may enhance or supplement the understanding, monitoring, prediction, and mitigation of wildland fire risks, and the relevant Program activities under section 3; and

(ii) in carrying out clause (i), shall consult with private sector entities through an advisory committee to identify needed tools and data that can be best provided by NOAA satellites and are most beneficial to wildfire and smoke detection and monitoring.

(5) Fire Weather Testbed.—In collaboration with Program agencies and other relevant stakeholders, the Administrator shall establish a Fire Weather Testbed to evaluate physical and social science, technology, and other research to develop fire weather products and services for implementation by relevant stakeholders.

(6) Wildland Fire and Fire Weather Research and Development.—The Administrator shall support a wildland fire and smoke research and development program that includes both physical and social science with the goals of—
(A) improving the understanding, prediction, detection, forecasting, monitoring, and assessments of wildland fires and associated fire weather and smoke;

(B) developing products and services to meet stakeholder needs;

(C) transitioning physical and social science research into operations;

(D) improving modeling and technology, including coupled fire-atmosphere fire behavior modeling, in consultation with relevant Federal agencies;

(E) better understanding of links between fire weather events and subseasonal-to-climate impacts; and

(F) pursuing high-priority fire science research needs applicable to the National Oceanic and Atmospheric Administration as identified by any other relevant Federal program.

(7) EXTRAMURAL RESEARCH.—The Administrator shall collaborate with and support the non-Federal wildland fire research community, which includes institutions of higher education, private entities, nongovernmental organizations, and other relevant stakeholders, by making funds available
through competitive grants, contracts, and cooperative agreements. In carrying out the program under this paragraph, the Administrator, in collaboration with other relevant Federal agencies, may establish one or more national centers for prescribed fire and wildfire sciences that leverage Federal research and development with university and nongovernmental partnerships.

(8) HIGH PERFORMANCE COMPUTING.—The Administrator, in consultation with the Secretary of Energy, shall acquire high performance computing technologies and supercomputing technologies, leveraging existing resources, as practicable, to conduct research and development activities, support research to operations under this subsection, and host operational fire and smoke forecast models.

(d) FEDERAL EMERGENCY MANAGEMENT AGENCY.—The Administrator of the Federal Emergency Management Agency, acting through the United States Fire Administration, shall—

(1) support—

(A) the development of community risk assessment tools and effective mitigation techniques for preventing and responding to
wildland fires, including at the wildland-urban interface;

(B) wildland and wildland-urban interface fire and operational response-related data collection and analysis;

(C) public outreach, education, and information dissemination related to wildland fires and wildland fire risk; and

(D) promotion of wildland and wildland-urban interface fire preparedness and community risk reduction, to include hardening the wildland-urban interface through proper construction materials, land use practices, sprinklers, assessment of State and local emergency response capacity and capabilities, and other tools and approaches as appropriate;

(2) in collaboration with the National Institute of Standards and Technology; and other program agencies, as appropriate, promote and assist in the implementation of research results and promote fire-resistant buildings, retrofit, and land use practices within the design and construction industry, including architects, engineers, contractors, builders, planners, code officials, and inspectors;
(3) establish and operate a wildland fire preparedness and mitigation technical assistance program to assist State, local, Tribal and territorial governments in using wildland fire mitigation strategies, including through the adoption and implementation of wildland and wildland-urban interface fire resistant codes, standards, and land use;

(4) incorporate wildland and wildland-urban interface fire risk mitigation and loss avoidance data into the Agency’s existing risk, mitigation, and loss avoidance analyses;

(5) incorporate data on the adoption and implementation of wildland and wildland-urban interface fire resistant codes and standards into the Agency’s hazard resistant code tracking resources;

(6) translate new information and research findings into best practices to improve firefighter, fire service, and allied professions training and education in wildland fire response, crew deployment, prevention, mitigation, resilience, and firefighting;

(7) conduct outreach and information dissemination to fire departments regarding best practices for wildland and wildland-urban interface firefighting, training, and fireground deployment;
(8) in collaboration with other relevant Program agencies and stakeholders, develop a national level, interactive and publicly accessible wildland fire hazard severity map that includes community and parcel level data and that can readily integrate with risk gradations within wildland and wildland-urban interface fire resistant codes and standards; and

(9) develop resources regarding best practices for establishing or enhancing peer-support programs within wildland fire firefighting units.

(e) NATIONAL AERONAUTICS AND SPACE ADMINISTRATION.—The responsibilities of the Administrator of the National Aeronautics and Space Administration (in this subsection referred to as the "Administrator") with respect to the Program are as follows:

(1) IN GENERAL.—The Administrator shall, with respect to the Program—

(A) support relevant basic and applied scientific research and modeling;

(B) ensure the use in the Program of all relevant National Aeronautics and Space Administration Earth observations data for maximum utility;

(C) explore and apply novel tools and technologies in the activities of the Program;
(D) support the translation of research to operations, including to Program agencies and relevant stakeholders;

(E) facilitate the communication of wildland fire research, knowledge, and tools to relevant stakeholders; and

(F) use commercial data where such data is available and accessible through existing Federal government commercial contracts, agreements, or other means, and purchase data that is deemed necessary based on consultation with other Program agencies.

(2) WILDLAND FIRE RESEARCH AND APPLICATIONS.—The Administrator shall support basic and applied wildland fire research and modeling activities, including competitively-selected research, to—

(A) improve the understanding and prediction of fire environments, wildland fires, associated smoke, and their impacts;

(B) improve the understanding of the impacts of climate change and variability on wildland fire risk, frequency, and severity;

(C) characterize the pre-fire phase and fire-inducing conditions, such as soil moisture and vegetative fuel availability;
(D) characterize the active fire phase, such as fire and smoke plume mapping, fire behavior and spread modeling, and domestic and global fire activity;

(E) characterize the post-fire phase, such as landscape changes, air quality, erosion, landslides, and impacts on carbon distributions in forest biomass;

(F) contribute to advancing predictive wildland fire models;

(G) address other relevant investigations and measurements prioritized by the National Academies of Sciences, Engineering, and Medicine Decadal Survey on Earth Science and Applications from Space;

(H) improve the translation of research knowledge into actionable information;

(I) develop research and data products, including maps, decision-support information, and tools, and support related training as appropriate and practicable;

(J) collaborate with other Program agencies and relevant stakeholders, as appropriate, on joint research and development projects, in-
including research grant solicitations and field campaigns; and

(K) transition research advances to operations, including to Program agencies and relevant stakeholders, as practicable.

(3) **Wildland fire data systems and computational tools.**—The Administrator shall—

(A) identify, from the National Aeronautics and Space Administration’s Earth science data systems, data, including combined data products and relevant commercial data sets, that can contribute to improving the understanding, monitoring, prediction, and mitigation of wildland fires and their impacts, including data related to fire weather, plume dynamics, smoke and fire behavior, impacts of climate change and variability, land and property burned, wildlife and ecosystem destruction, among other areas;

(B) prioritize the dissemination of data identified or obtained under this subparagraph to the widest extent practicable to support relevant research and operational stakeholders;

(C) consider opportunities to support the Program under section 2 and the Program ac-
tivities under section 3 when planning and developing Earth observation satellites, instruments, and airborne measurement platforms;

(D) identify opportunities, in collaboration with Program agencies and relevant stakeholders, to obtain additional airborne and space-based data and observations that may enhance or supplement the understanding, monitoring, prediction, and mitigation of wildland fire risks, and the relevant Program activities under section 3, and consider such options as commercial solutions, including commercial data purchases, prize authority, academic partnerships, and ground-based or space-based instruments, as practicable and appropriate; and

(E) contribute to and support, to the maximum extent practicable, the centralized, integrated data collaboration environment per section 3(2) and any other relevant interagency data systems, by collecting, organizing, and integrating the National Aeronautics and Space Administration's scientific data, data systems, and computational tools related to wildland fires, associated smoke, and their impacts, and by enhancing the interoperability, useability,
and accessibility of National Aeronautics and Space Administration’s scientific data, data systems, and computational tools, including—

(i) observations and available real-time and near-real-time measurements;

(ii) derived science and data products, such as fuel conditions, risk and spread maps, and data products to represent the wildland-urban interface;

(iii) relevant historical and archival observations, measurements, and derived science and data products; and

(iv) other relevant decision support and information tools.

(4) Novel Tools for Active Wildland Fire Monitoring and Risk Mitigation.—The Administrator, in collaboration with other Program agencies and relevant stakeholders shall apply novel tools and technologies to support active wildland fire research, monitoring, mitigation, and risk reduction, as practicable and appropriate. In particular, the Administrator shall:

(A) Establish, in collaboration with the heads of other relevant Federal agencies, a program to develop and demonstrate a unified con-
cept of operations for the safe and effective deployment of diverse air capabilities in active wildland fire monitoring, mitigation, and risk reduction. The objectives of the Program shall be to—

(i) develop and demonstrate a wildland fire airspace operations system accounting for piloted aircraft, uncrewed aerial systems, and other new and emerging capabilities such as autonomous and high-altitude assets;

(ii) develop an interoperable communications strategy;

(iii) develop a roadmap for the on-ramping of new technologies, capabilities, or entities;

(iv) identify additional development, testing, and demonstration that would be required to expand the scale of operations;

(v) identify actions that would be required to transition the unified concept of operations in subparagraph (A) into ongoing, operational use; and

(vi) other objectives, as deemed appropriate by the Administrator.
(B) Develop and demonstrate affordable and deployable sensing technologies, in consultation with other Program agencies and relevant stakeholders, to improve the monitoring of fire fuel and active wildland fires, wildland fire behavior models and forecast, mapping efforts, and the prediction and mitigation of wildland fires and their impacts. The Administrator shall—

(i) test and demonstrate technologies such as infrared, microwave, and active sensors suitable for deployment on spacecraft, aircraft, uncrewed aerial systems, and ground-based and in situ platforms, as appropriate and practicable;

(ii) develop and demonstrate affordable and deployable sensing technologies that can be transitioned to operations for collection of near-real-time localized measurements;

(iii) develop and demonstrate near-real-time data processing, availability, interoperability, and visualization, as practicable;
(iv) identify opportunities and actions required, in collaboration with Program agencies and relevant stakeholders, to transition relevant technologies, techniques, and data to science operations, upon successful demonstration of the feasibility and scientific utility of the sensors and data;

(v) transition demonstrated technologies, techniques, and data into ongoing, operational use, including to Program agencies and relevant stakeholders;

(vi) prioritize and facilitate, to the greatest extent practicable, the dissemination of these science data to operations, including to Program agencies and relevant stakeholders; and

(vii) consider opportunities for potential partnerships, including commercial data purchases, among industry, government, academic institutions, and non-profit organizations and other relevant stakeholders in carrying out clauses (i) through (vi), as appropriate and practicable.
(f) ENVIRONMENTAL PROTECTION AGENCY.—The Administrator of the Environmental Protection Agency shall support environmental research and development activities to—

(1) improve the understanding of—

(A) wildland fire smoke plume characteristics, chemical transformation, chemical composition, and transport;

(B) wildland fire and smoke impacts to contaminant containment and remediation;

(C) the contribution of wildland fire emissions to climate forcing emissions;

(D) differences between the impacts of prescribed fires compared to other wildland fires on communities and air and water quality; and

(E) climate change and variability on wildland fires and smoke plumes, including on smoke exposure;

(2) develop and improve tools, sensors, and technologies including databases and computational models, to accelerate the understanding, monitoring, and prediction of wildland fires and smoke exposure;

(3) better integrate observational data into wildland fire and smoke characterization models to
improve modeling at finer temporal and spatial resolution; and

(4) improve communication of wildland fire and smoke risk reduction strategies to the public in coordination with relevant stakeholders and other Federal agencies.

(g) DEPARTMENT OF ENERGY.—The Secretary of Energy shall carry out research and development activities to—

(1) create tools, techniques, and technologies for—

(A) withstanding and addressing the current and projected impact of wildland fires on energy sector infrastructure;

(B) providing real-time or near-time awareness of the risks posed by wildland fires to the operation of energy infrastructure in affected and potentially affected areas, including by leveraging the Department’s high-performance computing capabilities and climate and ecosystem models;

(C) enabling early detection of, and assessment of competing technologies and strategies for addressing, malfunctioning electrical equip-
ment on the transmission and distribution grid, including spark ignition causing wildland fires;

(D) assisting with the planning, safe execution of, and safe and timely restoration of power after emergency power shut offs following wildland fires started by grid infrastructure;

(E) improving electric grid and energy sector safety and resilience in the event of multiple simultaneous or co-located weather or climate events leading to extreme conditions, such as extreme wind, wildland fires, extreme cold, and extreme heat; and

(F) improving coordination between utilities and relevant Federal agencies to enable communication, information-sharing, and situational awareness in the event of wildland fires that impact the electric grid;

(2) coordinate data and computational resources across relevant entities to improve our understanding of wildland fires and to promote resilience and wildland fire prevention in the planning, design, construction, operation, and maintenance of transmission infrastructure;
(3) consider optimal building energy efficiency and weatherization practices, as practicable, in wildland fire research;

(4) utilize the Department of Energy's National Laboratory capabilities, including user facilities, earth and environmental systems modeling resources, and high-performance computing and data analytics capabilities, to improve the accuracy of efforts to understand and predict wildland fire behavior and occurrence and mitigate wildland fire impacts; and

(5) foster engagement between the National Laboratories and practitioners, researchers, policy organizations, utilities, and other entities the Secretary determines to be appropriate to understand the economic and social implications of power disruptions caused by wildland fires, particularly within disadvantaged communities and regions vulnerable to wildland fires, including rural areas.

SEC. 8. BUDGET ACTIVITIES.

The Director of the National Institute of Standards and Technology, the Director of the National Science Foundation, the Administrator of the National Oceanic and Atmospheric Administration, the Director of the Federal Emergency Management Agency, the Administrator
of the National Aeronautics and Space Administration,
the Administrator of the Environmental Protection Agen-
cy, and the Secretary of Energy shall each include in the
annual budget request to Congress of each respective
agency a description of the projected activities of such
agency under the Program for the fiscal year covered by
the budget request and an estimate of the amount such
agency plans to spend on such activities for the relevant
fiscal year.

SEC. 9. DEFINITIONS.

In this Act:

(1) DIRECTOR.—The term "Director" means
the Director of the Office of Science and Technology
Policy.

(2) PROGRAM.—The term "Program" means
the Program established under section 2.

(3) PROGRAM AGENCIES.—The term "Program
agencies" means any Federal agency with respon-
sibilities under the Program.

(4) STAKEHOLDERS.—The term "stakeholders"
means any public or private organization engaged in
addressing wildland fires, associated smoke, and
their impacts, and shall include relevant Federal
agencies, States, territories, Tribes, State and local
governments, businesses, not-for-profit organiza-
tions, including national standards and building code
organizations, firefighting departments and organi-
izations, academia, and other users of wildland fire
data products.

(5) WILDLAND FIRE.—The term “wildland
fire” means any non-structure fire that occurs in
vegetation or natural fuels and includes wildfires
and prescribed fires.

(6) FIRE ENVIRONMENT.—The term “fire envi-
ronment” means surrounding conditions, influences,
and modifying forces of topography, fuel, and weather
that determine fire behavior.

SEC. 10. AUTHORIZATION OF APPROPRIATIONS.

(a) NATIONAL INSTITUTE OF STANDARDS AND
TECHNOLOGY.—There are authorized to be appropriated
